### **TECHNICAL SKILLS**

- SOFTWARE BUILDING: Able to build Linux packages from source.
- SCRIPTING: BASH
- LINUX ADMIN: user management, upgrading live email servers to the next major release.
- Operating Systems: Debian, CentOS, Windows 10
- MONITORING: Nagios 3
- Critical Thinking

### PROFESSIONAL EXPERIENCE

### **Linux Force, Inc**

- Recovery of root password on-site CentOS system.
- Setup new server in Data Center to include setting up the RAID, LVM, and establishing remote access so the off-site admins could manage the system.
- Written custom BASH scripts to help in performing mail server audits.
- Upgraded multiple Devcot servers one major release number. The configuration files from one version to anther required a lot of attention in order to minimize downtime.
- Migrated Bind9 to a new server.
- Added pertinent information to the Linux Force wiki for the next admin to use.
- Provisioning of WordPress sites.
- Fixed Squirrel Mail broken vacation setting.
- Physically migrated servers from TierPoint's Conshohocken to their Shipyard location, and brought those servers online.
- Onsite server restart for a customer.
- Upgraded PostgreSQL database one major number release. Challenging configuration file differences.
- Monitored 129 servers with Nagios.
- I had elevated privileges on 6 of those servers.
